Seaman Timber Company Celebrates Golden Year

From Staff Reports

In the summer of 1955, James D. Seaman came to Alabama and established a small business in the quiet town of Montevallo. Over the years, that business grew into one of the premier family-owned forest products companies in the South.

On May 27, Ala. Gov. Bob Riley and more than 500 friends, associates and family members gathered at Seaman Timber Company to share good food and great memories in honor of Jim Seaman and the golden anniversary of his enterprise.

Riley complimented Seaman for the remarkable achievements of this one-generation business. Riley also praised Seaman Timber Company’s workforce and members of the Seaman family, noting that no one person achieves this level of success alone.

Referring to Janet Seaman in particular, Riley said, “we all know how much she has done for this business and for her husband as a real partner in this endeavor.”

The state of Alabama was further represented by Sen. Hank Erwin and Rep. Cam Ward, who brought a proclamation enacted by the state legislature naming May 27th Seaman Timber Company Day in the state of Alabama.

Among those in attendance were NASCAR driver Donnie Allison and his wife, Pat, who developed a long-time friendship with the Seamans after becoming a customer of Seaman’s Thoroughbred Fencing products many years ago. U.S. Rep. Spencer Bachus, although not in attendance, sent a letter of congratulations that was read during the ceremonies.

Also making congratulatory remarks were representatives of the Alabama Forestry Association and the Railway Tie Association, two of Seaman Timber Company’s longest industry affiliations. RTA Executive Director Jim Gauntt noted that this was also a silver anniversary for Seaman Timber Company as this marked their 25th year as members of RTA.

“The influence that Seaman Timber Company has had in the tie business through the RTA has made us a better industry and a better association,” Gauntt said.

Seaman, a former RTA president, and his wife were the first joint recipients of the RTA’s highest producer recognition, the Broad Axe Award. That honor was bestowed on them in 1995.

Benefits of a HEALTHY MANUFACTURING INDUSTRY in the United States

Manufacturing is the engine that drives American prosperity. It is central to our economic security and national security. Manufacturing:

- **Grows the economy.** Every $1 in manufactured goods generated an additional $1.43 worth of additional economic activity—more than any other economic sector.
- **Invents the future.** Manufacturers are responsible for almost two-thirds of all private sector R&D, which ultimately benefits other manufacturing and non-manufacturing activities.
- **Competes internationally.** The United States is the world’s largest exporter: 62 percent of all U.S. exports are manufactured goods, double the level of 10 years ago.
- **Generates productivity increases.** Over the past two decades, manufacturing productivity gains have been double that of other economic sectors. These gains enable Americans to do more with less, increase our ability to compete and facilitate higher wages for all employees.
- **Provides more rewarding employment.** Manufacturing compensation averages more than $54,000, the highest in the private sector, and manufacturers are leaders in employee training.
- **Pays the taxes.** Manufacturing has been an important contributor to economic growth and tax receipts at all levels of government, contributing one-third of all corporate taxes collected by state and local governments.
